PS04 · NAMMA KANNADA

ಕನ್ನಡದ ಬೇರು

Kannadada Beru

A regional language explorer where words remain connected to place, people, meaning and permission.

ಪ್ರತಿಯೊಂದು ನುಡಿಗೂ ಕಥೆಯಿದೆ. ಪ್ರತಿಯೊಂದು ಕಥೆಗೂ ನೆಲವಿದೆ.

Winning MVP submission · October 2026

Regional Kannada lives in memory, not in one searchable place

A language explorer must show difference without reducing it to stereotypes.

Scattered knowledge

Words and expressions live across families, local publications, dictionaries and spoken memory.

Context gets lost

A word without locality, meaning and cultural setting can easily become a misleading regional claim.

Voices need consent

District metadata helps discovery, but it cannot prove native variety or public recording rights by itself.

Our answer: preserve the relationship between language, land and evidence.

One journey from place to word to voice

The homepage now leads directly to the most distinctive regional-language experience.

Judge journey

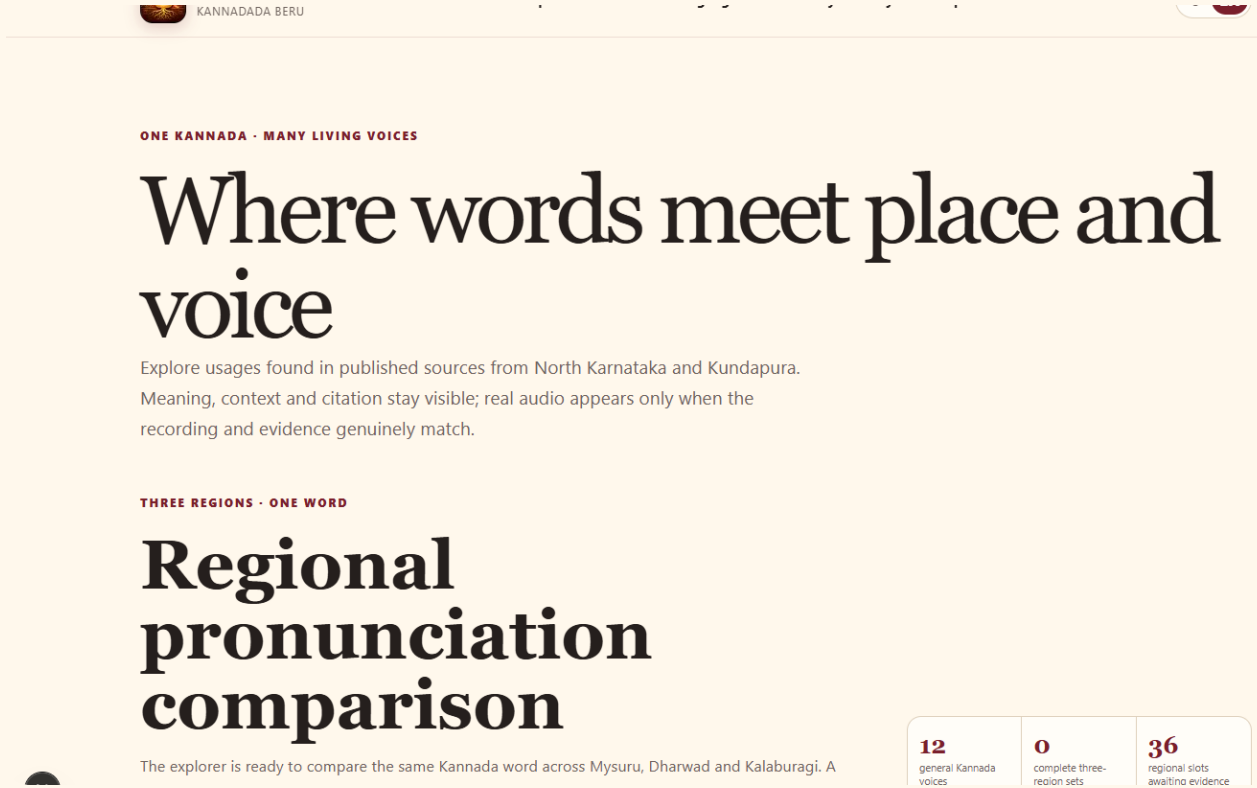

Home → Many Living Voices → district or region → comparison → Pada Beru → contribution

Kannada first

Kannada leads the interface. English and Romanization make the experience accessible without replacing the language.

ಒಂದೇ ಕನ್ನಡ · ಹಲವು ಬದುಕಿನ ನುಡಿಗಳು

One Kannada · many living voices

12 General Kannada voices

Each local OGG keeps its Commons source, speaker, date, CC0 licence and checksums. No speaker region is claimed.

36 regional evidence gates

Mysuru, Dharwad and Kalaburagi Play controls stay disabled until the same prompt, consent, origin metadata and two human checks match.

Every district opens into a bilingual story

All 31 current Karnataka districts connect history, culture, places and the wider language landscape.

31 district profiles

Kannada and English history, local character, three places to explore, official government link and regional-language pathways.

Map with context

The bundled Census 2011 geography supports navigation and is never presented as a dialect boundary.

A complete visitor journey

District pages lead back into regional words and voices instead of ending at an external government website.

156,650 Kannada-English entries without a heavy download

The open Alar dictionary is split into 50 Kannada-initial shards and loaded on demand.

Search three ways

Kannada script, Romanized Kannada and English meaning.

139,991 headwords

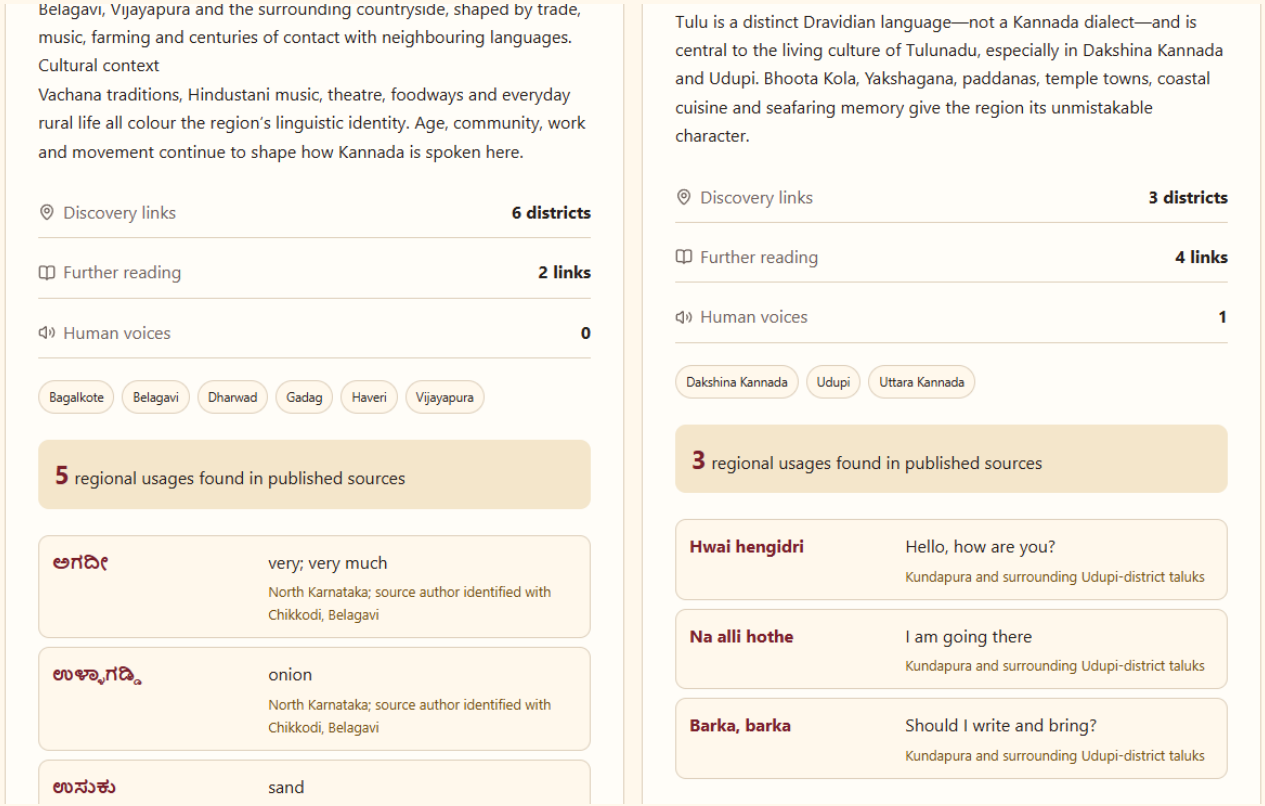

247,674 English definitions with direct source links.

Clear evidence layers

General dictionary entries never become regional claims through guesswork.

Compare without flattening

Two regional portraits sit side by side with geography, culture, documented usage, sources and voice counts.

Belagavi, Vijayapura and the surrounding countryside, shaped by trade, music, farming and centuries of contact with neighbouring languages.

Cultural context

Vachana traditions, Hindustani music, theatre, foodways and everyday rural life all colour the region's linguistic identity. Age, community, work and movement continue to shape how Kannada is spoken here.

Bagalkote · Belagavi · Dharwad · Gadag · Haveri · Vijayapura

5 regional usages found in published sources

ಅಗದೀ	very; very much North Karnataka; source author identified with Chikkodi, Belagavi
ಉಳ್ಳಾಗಡ್ಡಿ	onion North Karnataka; source author identified with Chikkodi, Belagavi
ಉಸುಕು	sand

Tulu is a distinct Dravidian language—not a Kannada dialect—and is central to the living culture of Tulunadu, especially in Dakshina Kannada and Udupi. Bhoota Kola, Yakshagana, paddanas, temple towns, coastal cuisine and seafaring memory give the region its unmistakable character.

Discovery links **3 districts**

Human voices **1**

Dakshina Kannada · Udupi · Uttara Kannada

3 regional usages found in published sources

Hwai hengidri	Hello, how are you? Kundapura and surrounding Udupi-district taluks
Na alli hothe	I am going there Kundapura and surrounding Udupi-district taluks
Barka, barka	Should I write and bring? Kundapura and surrounding Udupi-district taluks

Four careful discovery regions

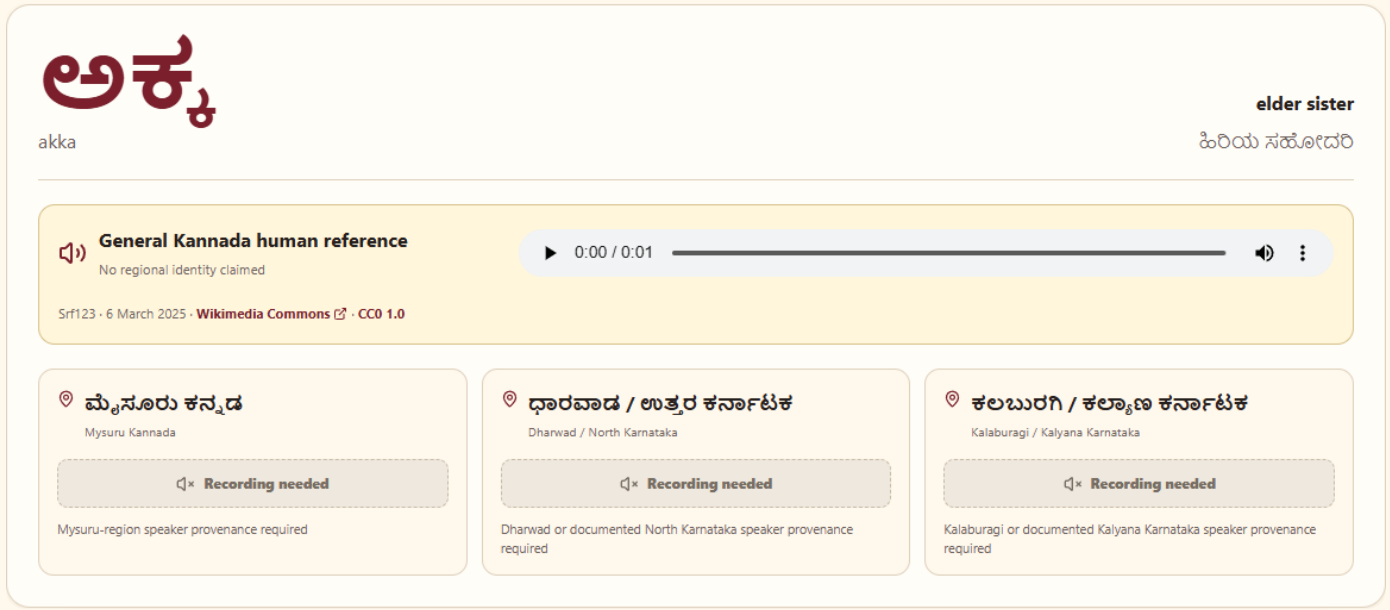

Old Mysuru, North Karnataka, Coastal Karnataka and Kalyana Karnataka.

No false equivalence

Unrelated words are not paired as the same concept. Read speech, spontaneous speech, vocabulary and pronunciation remain distinct.

Human audio with a visible evidence boundary

Twelve Kannada clips are available now. Regional identity remains unclaimed until the evidence is complete.

12 integrity checked OGG files

Exact word, uploader, source date, public file page, CC0 status, byte length and SHA-256 stay together in the manifest.

0 completed regional sets

The source proves Kannada pronunciation, but it does not publish Mysuru, Dharwad or Kalaburagi speaker metadata. The interface says so plainly.

Public region metadata exists, but no ready same-prompt comparison

The audit prioritised sources that do not require a private dataset login.

IISc NISP

Public CC BY 4.0 repository with Kannada transcripts and district of upbringing. Target speakers exist for Mysore, Dharwad and Gulbarga.

Why NISP stays research only

The five target speakers read different prompt sets. Extracting common words requires a 1.53 GB archive, alignment and native review.

Other verified sources

OpenSLR 79 has no region labels. RESPIN documents five varieties but requires an access form. LDC-IL is about 115 GB with access conditions.

Release status: 12 General Kannada references · 0 verified regional sets

Discovery becomes play, then contribution

The experience closes with a useful action instead of a dead end.

Pada Beru

Ten rounds of Kannada ↔ English meaning challenges with score, streak, hints and optional device pronunciation.

Consent based recording kit

The downloadable form records district of upbringing, exact prompt, chosen credit, licence, speaker replay and second community review.

Static-first, private by default, built for ordinary phones

No account, paid API, map token or external database is needed for the core journey.

Next.js 16 · React 19

Static App Router pages, strict TypeScript, installable PWA and offline shell.

Local data layers

31 district profiles, 8 regional usages, 12 audio files, local GeoJSON and 50 dictionary shards.

Interaction

MapLibre atlas, search, comparison, audio player, Pada Beru and local contribution drafts.

Delivery

Vercel HTTPS and CDN

Quality

Vitest and Playwright

Privacy

No silent data upload

Licensing

Attribution stays visible

Open source · MIT code licence · third-party data keeps its own terms

Tested across the complete public experience

The release gate checks source contracts, production generation and real browser journeys.

46 / 46

unit tests across 15 files

49

statically generated routes

48 pass

Android and desktop production journeys · offline PWA reopening included

0

known production dependency vulnerabilities

Atlas · district learning · regional voices · dictionary · comparison · audio · game · contribution · PWA

Live verification follows deployment at kannadada-beru.vercel.app

ಕನ್ನಡದ ಬೇರು

A language survives when people can find their own place inside it.

Our goal is simple: let people from across Karnataka discover a familiar word, understand its story, and hear a real community voice when the evidence is ready.
